Summary

.NET developer with professional experience building production APIs and enterprise integrations. Demonstrated expertise modernizing legacy systems, implementing CI/CD pipelines, and integrating third-party APIs in Agile environments. Passionate about continuous learning with personal projects exploring Blazor Server and real-time data processing.

Experience

Irvine Unified School District **July 2024 - Present**
Analyst I Programmer Irvine

- Designed and implemented a centralized username generation system for 10,000+ employees and students, reducing manual user creation time and eliminating username collisions through integrated database storage.
- Developed a scalable Minimal API using .NET 8 with modular architecture, enabling future extensibility and serving as key integration point for MyPortal HR application.
- Served as key contributor to MyPortal HR application, integrating username management capabilities and implementing data validation features to streamline HR workflows.
- Modernized database migration processes by implementing a code-first Entity Framework approach, improving maintainability and version control while replacing legacy SQL and bash scripts.
- Automated CI/CD workflows by creating Azure DevOps pipelines for building, publishing, and deploying APIs to IIS, reducing deployment time and errors.
- Led cross-functional meetings and collaborated with IT and HR teams to troubleshoot and resolve critical user account issues.

Apple **January 2022 - July 2022**
QA Identity Services Remote

- Managed a significant workload of over 9000+ tickets during a 6-month internship, showcasing exceptional organizational and multitasking abilities.
- Enhanced team efficiency by refining internal repository documentation, benefiting both the team and new interns in streamlining triage processes.
- Optimized automated log-parsing scripts, reducing bug triage time by 50% and enabling faster resolution of critical issues.
- Collaborated with development teams to route tickets to the appropriate teams, resulting in more efficient resolution of issues.

Education

California State University, Fullerton **December 2022**
Computer Science Bachelor of Science

Projects

MockBot Discord Bot **March 2025**
Cloud, Python, Docker, Azure
https://discord.com/oauth2/authorize?client_id=1344027081021067274

- Designed and implemented a Discord bot using Python and py-cord library that features slash commands for message mocking functionality, demonstrating practical application of Discord API integration.
- Containerized the application using Docker to create consistent deployment environments, enabling seamless transition from development to production.
- Strategically selected Azure Container Instances for cloud deployment, minimizing operational costs while maintaining reliability for this lightweight application.

Guess That AsciiMon
Blazor Server, C#, Azure guessing game
https://playguessthat.com

- Developed interactive Pokemon guessing game using Blazor Server, integrating PokeAPI to fetch and process real-time data for 1,000+ Pokemon entries.
- Implemented custom ASCII art conversion service to transform sprite images into terminal-style graphics with real-time processing and rendering.
- Deployed to Azure App Service with service-oriented architecture using dependency injection, state management, and responsive terminal UI design.

Technical Skills

Technical Skills: C# • .NET 8 • ASP.NET Core • Blazor • Entity Framework Core • Python • SQL • JavaScript • Azure (App Service, DevOps) • AWS • Docker • CI/CD • IIS • SQL Server • Git/GitHub • RESTful APIs • Agile/SCRUM
